

MONROE PLATE CLEANING WAND

304 SS • 14 ft. Length

PVC • 8 ft. Length

Monroe Environmental® has developed a very effective tool for removing solids and debris accumulated on the separator plates of lamella-style inclined plate clarifiers: **The Monroe Plate Cleaning Wand**. This product has been developed as part of our continued effort to improve operations and maintenance for your plant, and is the perfect compliment to our top of the line Vertical Plate Clarifiers.

The Monroe Plate Cleaning Wand is ideal for in-place cleaning of separator plates and is intended for use while the unit is in operation – greatly reducing downtime required during routine maintenance procedures.

How it works:

Connect a pressurized water hose (standard city water pressure of 40 PSI is recommended) and insert the wand into the openings on top of the individual plates. The wand will flush solids and debris out of the plate packs and into the sludge collection section below. The cleaning wand (see above) extends the length of the plates, providing more reach than a traditional power washer wand. In some cases, removal of the plates may be necessary for a more thorough cleaning.

We recommend the Monroe Plate Cleaning Wand be added to assist with your preventative maintenance cycle.

Please feel free to contact our office to discuss other ways we can help you improve your day to day water treatment operations.

Material of Construction	Size	Price
304 Stainless Steel	14 ft. Length	\$3,200 + shipping
PVC	8 ft. Length	\$1,950 + shipping
